Project Udyam Digital

Enterprise Track A, Digital Track

From business needs to digital readiness, in one guided journey.

Team Shankhnad
MMMUT_GORAKHPUR

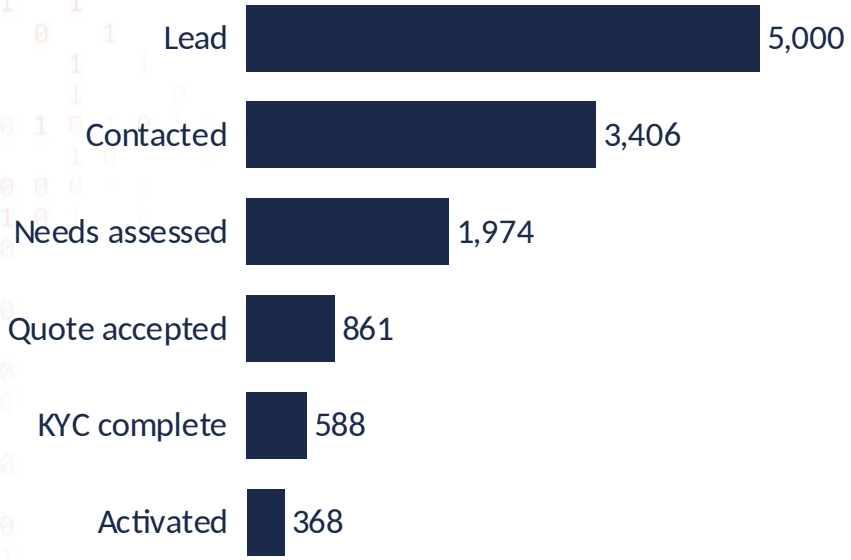

Platform Partner unstop

Friction, not demand, loses the customers

368 of 5,000 leads became customers (7.36%); every step loses more than 30% of those who reach it.

Leads reaching each stage

1,113 lost at the quote: price 621, slow or complex quote 385

827 lost because the needs visit never happened

273 accepted a quote, then dropped out at paperwork

220 lost after KYC: slow installs, no fibre, failed payments

What else the data shows

56 of 368
bundles sold broke the catalogue's own eligibility rules

₹24,335
CAC via field sales; ₹4,026-6,352 via web, WhatsApp, referral

23.0%
6-month churn after 4-5 status calls; 11.9% after 1-2

Observed in smb_leads.csv (synthetic, 5,000 leads, Apr-Jun 2026); analysis/01_data_audit.py and 02_business_diagnosis.py

Start with professionals and micro shops

Professionals pay back in 1.6 months, micro shops are half the leads; firms with 73% of revenue stay sales-led.

Segment, and who sells	Leads	Activation	CAC	New MRR	Bundle that fits: what its customers bought	Median price, term
Professional practices 1st: digital first, call-back	1,247	11.1%	₹10,695	**21%**	Fibre, postpaid SIMs, cloud email; many add security, backup	₹6,575 a month; 12 months
Micro retail & services 2nd: self-serve	2,709	4.1%	₹20,007	**6%**	Fibre and a postpaid SIM; a third add POS, Wi-Fi or CCTV	₹2,470 a month; 12 months
Multi-site businesses Field sales, digital KYC	755	11.0%	₹15,614	**57%**	Fibre and SIMs; about half add 4G/5G failover, POS, CCTV	₹28,080 a month; 12 months
Small manufacturers Key-account sales	289	12.8%	₹15,324	**16%**	SIMs, cloud email, leased line (73%); security, firewall	₹15,910 a month; 24 months

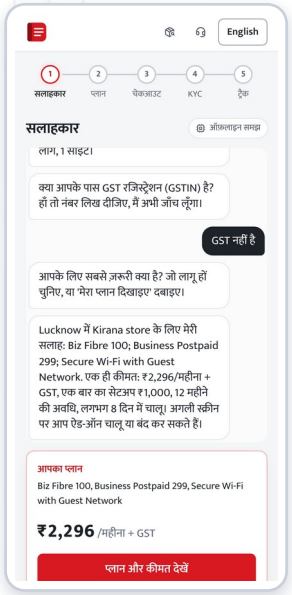

Field sales and partners keep a role
Sales take multi-site and factory deals over ₹25k a month. Partners serve cities not yet online and keep their QR sign-ups. Response: KYC reviewer 4 h, partner 48 h, sales or call-back 24 h.

Pricing
One catalogue-midpoint price per product: 100.2% of historic revenue. A Starter option beside every plan; GST shown apart; the server re-prices at checkout.

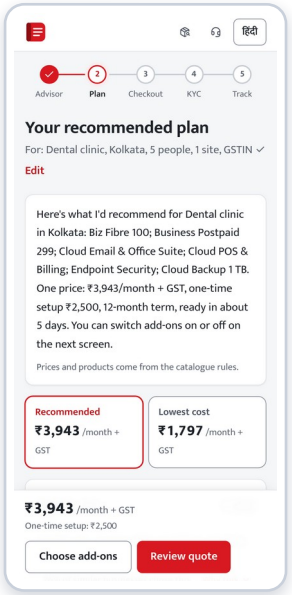

Observed in smb_leads.csv: bundles are what activated customers bought, medians (analysis/02b_segment_bundles.py)

One guided journey, in Hindi or English

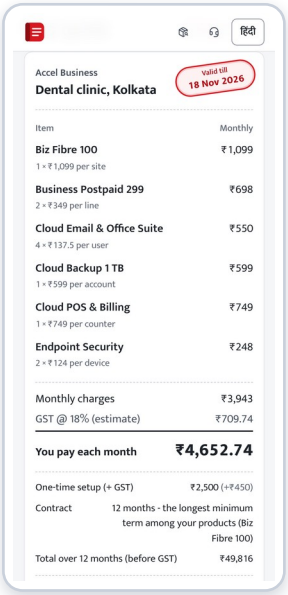

Fifteen screens from the first question to activation; a call-back is one tap away on each of them.

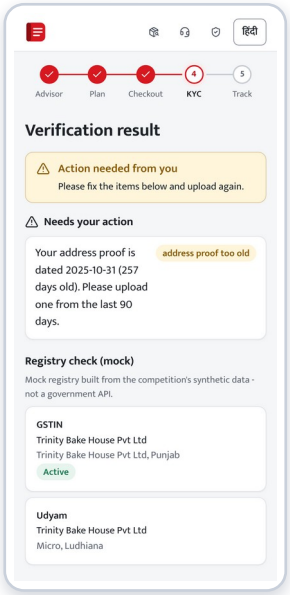

GenAI advisor, Hindi or English

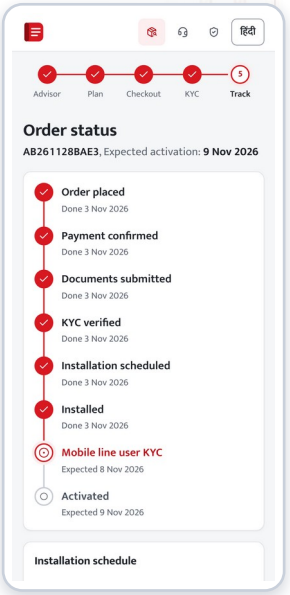

Reasons, cheaper option, add-on toggles

One price, GST shown, held 15 days

Fix-it steps instead of a rejection

Every milestone and date, no status calls

Captured from the running prototype with synthetic data (scripts/deck_screens.cjs); Accel Business is the case's fictional operator

Rivals list packages; we run the journey

Competitive analysis: how small businesses buy from four telcos today, from their public pages and press.

	Airtel Office Internet	JioBusiness	Tata Tele Business	Vi Business	Udyam Digital (ours)
What is sold	Fibre up to 1 Gbps, calls; one bill	Fibre, voice and digital tools	SmartOffice, Smartflo cloud calling	MSME offers; PayU partner tools	**A bundle from 25 products, built for this business**
Price before a sales call	Plans from ₹999	₹901 to ₹10,001 a month	—	—	**Exact quote with GST, held 15 days**
How an owner buys	Plan pages, then an enquiry	Register interest; an executive calls	Consultative, partner-led, with demos	Self-check tool; online or in a store	**Guided self-serve; a person on request**
Guided advice in Hindi or Hinglish	—	—	—	—	**Chat or form in English, Hinglish, Hindi**
Need to activation in one session	—	—	—	—	**Quote, KYC with fix-it steps, and a tracker**

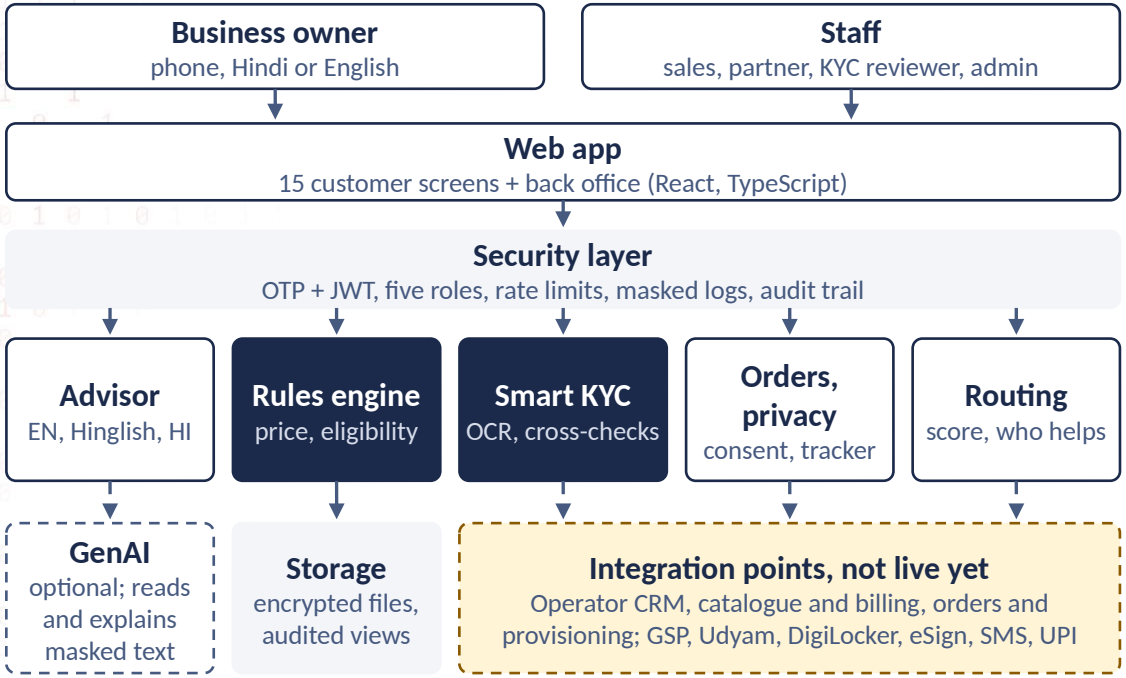

Where they lead: networks, brands and partners (Google Cloud, Cisco, PayU). The case notes rivals are starting to sign up single products online.

Our edge: one session from need to an eligible bundle, KYC and tracking, in the owner's language, on the operator's own catalogue.

— = not found on their public pages or in press, Nov 2026; not a claim about internal tools. Sources: docs/research/research_notes.md

Rules decide, models assist

One FastAPI service with separate modules; the rules engine and the KYC checks make every decision.

94% of fields right on 40 held-out messages in English, Hinglish, Hindi; GenAI off

2.28x activation rate in the top-scored 20% of June leads, against the average

98.7% of 149 labelled document fields read correctly

0 prices, eligibility rules or KYC decisions set by a language model

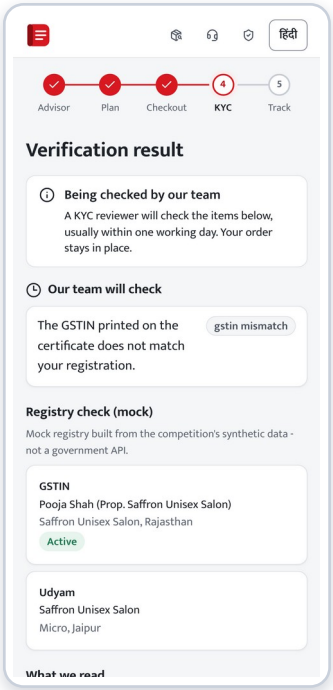

Held-out results: analysis/outputs/advisor_eval.md, ml_report.md (trained Apr-May, tested on June), ocr_benchmark.md

Verify in minutes, ask a person when unsure

Consent first, only the data KYC needs, and a reviewer instead of an automatic rejection.

1. Consent per purpose, before any upload
2. File checks; metadata stripped
3. Deskew, blur check, watermark removal
4. Three OCR passes; GSTIN checksum, formats
5. Mock GSTIN and Udyam lookup; cross-checks
6. Verified, fix-it request, or a reviewer

12 specimen applicants: 6 verified, 2 asked to fix, 4 to a reviewer
K06 GSTIN fails its checksum; K11 bill is 257 days old

DPDP Act 2023, by design

Consent: per purpose, before any upload; optional ones start off; withdraw any time.

Purpose limitation: KYC data is used only for KYC; partners see only their own leads.

Data minimisation: lookups send only the GSTIN or Udyam number; GenAI sees masked text, never documents.

Retention: documents deleted on schedule, and at once on withdrawal; encrypted, every view audited.

DPDP Rules 2025: notice, security and retention duties apply from 13-14 May 2027. Built in now; legal review before launch.

Specimen decisions are our own evaluation (analysis/03), not an answer key; GSTIN and Udyam registries are local mocks.

Five targets, proved in a two-city pilot

At 60% of leads digital: ₹3.1 crore extra revenue in year 1, and the build pays back in 11 months.

Lead to activation	Blended CAC	Days to activate	Quote acceptance	Calls to chase status
10.0%	**₹11,761**	**10.8**	**49.1%**	**1.5 or fewer**
from 7.36%	from ₹15,053	from 17.6	from 43.6%	from 3.0

Rollout, with a gate before each step

1. **Foundations** weeks 0-8
   GSP, SMS, payments; security review, legal sign-off
2. **Pilot in 2 cities** months 3-5
   A/B; gate: 1.1x activations, 0 KYC false accepts
3. **Scale to 10 cities** months 6-9
   Partner QR codes, DigiLocker, two more languages
4. **National** months 10-15
   Model retrained on real outcomes; eSign; DPDP live

Risks, and how we contain them

Risk	How we contain it
AI gives a wrong price or approval	GenAI never prices, decides eligibility or sees documents; offline fallback
Forged or reused documents	Checksum, registry and duplicate checks; a person decides every unclear case
Sales and partners feel bypassed	Routing rules, partner QR attribution; sales keep big and complex deals
Owners not comfortable online	Hindi or English, chat or form, call-back on every screen, partner help
Lead score learnt on synthetic data	It only orders the queue; retrained on pilot outcomes before scaling

Targets: expected case in analysis/05_business_case.py; the status-call target is an assumption. Privacy note: docs/privacy_security_note.pdf
